Product Description

The Dual Port Modulator Bias Controller is a null locking only miniature OEM version of the Modulator Bias Controller (MBC) family. It is designed to be used with MZ modulators with two DC ports for extremely high extinction ratio operation in analog systems and/or applications.

[1] For a given input, detection power refers to the coupled optical power to both photodiodes of the bias controller when the modulator output is at its minimum attenuation (The detection power does not describe the detected power at locking status).

[2] With PD of different wavelength, the wavelength range can be expanded.

[3] In this case, the modulator output power was greater than 0 dBm. 1% coupler was used.The extinction ratio will be close to but not exceed the extinction ratio of the modulator.
